

With your students, select an ecosystem to explore: Air, Land, Fresh Water, Marine

Use the lesson plans from that unit to help your students build content knowledge and research skills.

Students select a problem they have uncovered that they'd like to explore further.

Group students with similar problems/interests into teams and have them start their research.

Continue to refine research through experiments and testing.

Students put their recommendations into action!

Have students/teams present their findings with recommendations for addressing the problem.
